Regedit

Sunday 9 February 2025   13:48

Add "Open Pwsh7 Here" Command to context menu when right-clicking on directory in file explorer.
- Open Regedit
- Navigate to HKEY_CLASSES_ROOT\Directory\shell
- Add "Pwsh7" Folder
- Update the default value by double-clicking to "Open Pwsh7 Here"
- Add "command" Folder inside (Can it be any name?)
- Update the default value by double-clicking to: ***pwsh.exe -NoExit -Command Set-Location -LiteralPath '%L'***

Update Visual Studio Document Store Location
- Open Regedit
- Click "HKEY_USERS" or any other bucket would also work.
- File > Load Hive
- Select "privateregistry.bin" in the VisualStudio install folder
    - Mine was location here: **C:\Users\shanecreedon\AppData\Local\Microsoft\VisualStudio\17.0_1e23f545**
- Provide a name like "VS2022_custom_config"
- Click on the version and notice the document/ paths on the right-hand-side.
- Change these to where you want.
- Finally, click on the hive you created and then, File > Unload Hive (Otherwise this won't let VS start!)

Clear Recycle Bin Shortcut

Sunday 9 February 2025   13:51

- Investigate this on Google
- I set up a new shortcut by right-clicking on the desktop and adding a "New Shortcut"
- Somehow I was able to connect a recycle bin clear command to this.

Visual Studio 2022

Store settings file so we don't lose keybinds, but just to note:

- CTRL+SHIFT+ALT+S = Open Settings Dialog on keybind settings menu (Tools.Keyboard)
- CTRL+SHIFT+ALT+<LEFT_ARROW> = Navigate backwards (View.NavigateBackwards)
- CTRL+SHIFT+ALT+<RIGHT_ARROW> = Navigate forwards (View.NavigateForwards)

Note: Keybinds that match the above must be removed or replaced before the above will function correctly.
I am not sure if this is under "global" or in the specific area of the application (e.g., editor window, solution explorer etc...)

Useful Keyboard Shortcuts/Commands

Sunday 9 February 2025   13:57

- ALT + TAB = Swap between open application processes.
- WIN + TAB = Swap between open desktop windows
- WIN + E = Open File Explorer
- ALT + F4 = Close Application
- CTRL + W = Close Current Window
- WIN + SHIFT + S = Take Screenshot
- CTRL+SHIFT+ESCAPE = Open Task/Process Manager
- CTRL+ALT+DEL = Open Environment/Process Manager

Teams Shortcuts

Sunday 9 February 2025   19:44

- CTRL + <DOT> = Show Keyboard Shortcuts

Miscellaneous

For apps that do not allow shortcuts to be created, you can do the following:

1. Open Windows Run Men with CTRL+R
2. Type "shell:appsFolder"
3. Find the Microsoft (MS) or other application you need a shortcut for in this list.
4. Add a shortcut to the destop
5. Right-Click that desktop icon and apply a shortcut.

Note: This icon should be able to be moved accordingly.
